A classic SLR from the 1970s in an elegant black lacquered housing from the consignor Foto Quelle. The camera was manufactured by Chinon in Japan and, as usual with Foto Quelle, sold under the Revue label. The original was sold under the name Chinon CX . In keeping with the times, it is equipped with a tracking measurement for the work panel, which is switched on via the slide switch on the side of the mirror box. In contrast to the Praktica cameras, this switch has to be clicked in, which means that work is not that fast. A special feature that is often found with Chinon cameras is the possibility of multiple exposure, which is switched on by a small lever in front of the clamping lever. The camera was also available in a simpler version than RevueFlex 2000 CL . In the picture on the right you can see the cover sheet of a reprinted instruction manual.

The camera came to the museum as complete camera equipment, so you can see the composition of typical SLR equipment from the 1970s in the picture at the bottom left:

RevueFlex 3000 SL

Lens **Revue Auto Revuenon 1: 2.8 / 35 mm**

Lens **Revue Auto Revuenon 1: 1.7 / 55 mm**

Lens **Revue Auto Revuenon 1: 2.8 / 135 mm**

Flash unit **Brillant 505**
